DATE: August 2015

SUBJECT: AHERA Compliance Activities

AHERA is a federal law enacted in 1987 that requires all school districts to inspect facilities for asbestos containing building materials.

AHERA mandated an original inspection in 1988 and a re-inspection every three years.

Our facilities were re-inspected on May 9, 2013 and response reactions were planned to insure a continued safe environment for our students and employees. Asbestos activities include training of custodial and maintenance personnel, certification for staff performing operations and maintenance procedures and periodic surveillance every six months by trained personnel.

Details of such activities are described in the district's AHERA Management Plan, which is available for your review in the School District Offices located at Frank Knight Elementary School, 98 Clinton Street, Seneca Falls, New York.

If you have any questions or concerns regarding the AHERA compliance, please feel free to contact me.
